

Certyfikat UA20/819942667

System zarządzania

SGS

Spółki z ograniczoną odpowiedzialnością „ArtGrand”

9ZH Zhurnalistiv str., Dnipro city, Ukraina, 49051

została oceniona i certyfikowana jako spełniająca wymogi
ISO 9001:2015

Dla następujących działań
Projektowanie, produkcja i sprzedaż tapet ściennych

Niniejszy certyfikat jest ważny od 06 października 2023 r. do 22 września 2026 r. i zachowuje ważność pod warunkiem pomyślnego przeprowadzenia audytów nadzoru. Wydanie 2. Certyfikacja od 23 września 2020 r

Data wygaśnięcia ostatniego certyfikatu 22 września 2023 r.
Data audytu recertyfikacyjnego 31 sierpnia 2023 r.

DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

1. Niepowtarzalny kod identyfikacyjny typu produktu:	Spienione i tłoczone mechanicznie tapety winylowe na podłożu papierowym lub flizelinowym
2. Typ, numer partii lub serii lub jakiegokolwiek inny element umożliwiający identyfikację wyrobu budowlanego:	Sprawdź numer partii i artykuł na etykiecie
3. Zamierzone użycie lub zastosowanie wyrobu budowlanego zgodnie z obowiązującą ujednoliconą specyfikacją techniczną, przewidzianą przez producenta:	Okładzina ścienna w rolkach przeznaczona do przyklejania do ścian lub sufitów za pomocą kleju
4. Nazwa, zarejestrowana nazwa handlowa lub zarejestrowany znak towarowy oraz adres kontaktowy producenta:	ArtGrand Spółka z ograniczoną odpowiedzialnością Adres: ul. Żurnalistiw, 9Ż, m. Dniepr, Ukraina, 49051 ouk@artgrand.eu
5. Nazwa i adres kontaktowy upoważnionego przedstawiciela:	e-Delux GmbH Adres: Rontgenstr.8D-40699 Erkrath/Germany info@e-delux.de
6. System lub systemy oceny i weryfikacji stałości właściwości użytkowych wyrobu budowlanego:	System 3
7. Zharmonizowana norma:	EN 15102:2019 Instytut Badań Materiałów Budowlanych MPA BAU Hannover przeprowadził test reakcji na ogień i klasyfikację zgodnie z EN 13501-1:2018 w systemie 3 i wydał raport klasyfikacyjny nr 185893 z dnia 7 grudnia 2018 roku oraz Laboratorium WESSLING GmbH przeprowadziło próbę uwalniania formaldehydu, metali ciężkich, innych substancji niebezpiecznych oraz monomeru chlorku winylu (VCM) zgodnie z EN 12149:1997 oraz wydało certyfikaty: CAL18-151490-1 a/tec z dnia 14 listopada 2018 roku CAL18-151490-2 a/tec z dnia 14 listopada 2018 roku

8. Deklarowana wydajność

Zasadnicze cechy	Wydajność	Zharmonizowana specyfikacja techniczna
Reakcja na ogień	C-s1,d0	EN 13501-1:2018
Uwalnianie formaldehydu	< 120 mg/kg	EN 12149:1997
Uwalnianie metali ciężkich i konkretnych pierwiastków		EN 12149:1997
Antymon	< 0,5 mg/kg	
Arsen	< 25 mg/kg	
Bar	< 500 mg/kg	
Ołów	< 90 mg/kg	
Kadm	< 25 mg/kg	
Chrom	< 60 mg/kg	
Rtęć	< 20 mg/kg	
Selen	< 165 mg/kg	
Uwalnianie monomeru chlorku winylu	< 0,1 mg/kg	EN 12149:1997

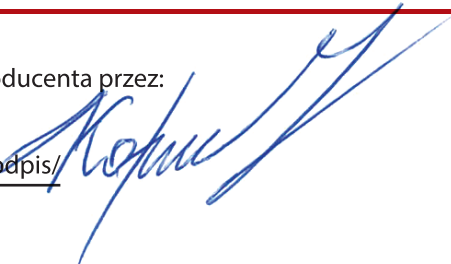

9. Wydajność produktu określonego w pkt. 1 i 2, jest zgodna z deklarowanymi właściwościami użytkowymi ujętymi w punkcie 8. Niniejsza deklaracja zgodności wydana zostaje na wyłączną odpowiedzialność producenta określonego w punkcie 4.

Podpisano dla oraz w imieniu producenta przez:

Dyrektor I.O. Koren

DECLARATION OF PERFORMANCE

1. Unique identification code of the product-type:	Mechanically embossed vinyl wallcovering with paper or non-woven backing
2. Type, batch or serial number or any other element allowing identification of the construction product:	See the batch and article number on the label
3. Intended use or uses of the construction product, in accordance with the applicable harmonised technical specification, as foreseen by the manufacturer:	Wallcovering in roll form supplied for hanging onto walls or ceilings by means of an adhesive.
4. Name, registered trade name and contact address of the manufacturer:	«ArtGrand» Limited Liability Company Address: 9ZH Zhurnalstiv str., Dnipro city, Ukraine 49051 ouk@artgrand.eu
5. Name and contact address of the authorised representative:	e-Delux GmbH Address: Röntgenstr.8D-40699 Erkrath/ Germany info@e-delux.de
6. System of assessment and verification of constancy of performance of the construction product:	System 3
7. Harmonised standard:	EN 15102:2019 MPA BAU Hannover, performed reaction to fire test and classification according to EN 13501-1:2018 under system 3 and issued classification report nr. 185893 dated December 7th 2018. WESSLING GmbH, performed release tests of formaldehyde, heavy metals, other dangerous substances and Vinylchloride-Monomer (VCM) according to EN 12149:1997 and issued Report-No.: CAL18-151490-1a/tec, dated November 14th, 2018

8. Declared performance

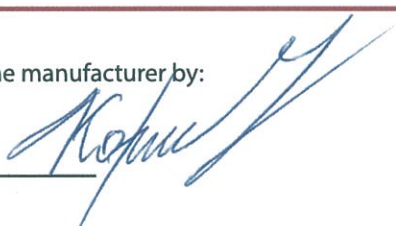

Essential characteristics	Performance	Harmonized technical specification
Reaction to fire	C-s1, d0	EN 13501-1:2018
Release of formaldehyde	< 120 mg/kg	EN 12149:1997
Release of heavy metals and specific elements		EN 12149:1997
Antimony	< 0,5 mg/kg	
Arsenic	< 25 mg/kg	
Barium	< 500 mg/kg	
Lead	< 90 mg/kg	
Cadmium	< 25 mg/kg	
Chromium	< 60 mg/kg	
Mercury	< 20 mg/kg	
Selenium	< 165 mg/kg	
Release of vinyl chloride monomer	< 0,1 mg/kg	EN 12149:1997

9. The performance of the product identified in points 1 and 2 is in conformity with the declared performance in point 8.
This declaration of performance is issued under the sole responsibility of the manufacturer identified in point 4.

Signed for and on behalf of the manufacturer by:

Director I.O. Koren

Dnipro, February 03 2025

INSTRUKCJE BEZPIECZEŃSTWA

Przeznaczenie i ograniczenie wykorzystania

Zastosowanie tapet:

- Pomieszczenia mieszkalne, takie jak salony, sypialnie, korytarze, biura.
 - Łazienki, kuchnie – tapeta o odporności na ścieranie nie niższej niż M-2.
- Nieprzeznaczone do:
- Podłóży nieprzygotowanych, kruszących się lub o dużej porowatości, silnie chłonących wodę.

Bezpieczeństwo pożarowe

Europejska norma EN 15102:2019 „Dekoracyjne pokrycia ściennie” zawiera obowiązkowe wymagania dotyczące klasyfikacji ogniowej tapet. Tapety firmy ArtGrand zostały przetestowane w Instytucie Badań Materiałów Budownictwa Cywilnego i Technologii Produkcyjnych MPA BAU Hannover. Tapetom przyznano klasę zagrożenia pożarowego C s1, d0, co oznacza, że tapety winylowe produkowane przez Spółkę ArtGrand są trudnopalne, wytwarzają bardzo mało dymu i nie wytwarzają płonących kropli. Tapety mogą się zapalić tylko od otwartego ognia, ale jeśli usunąć źródło płomienia, tapety nie podtrzymują spalania i samoczynnie gasną.

Należy przestrzegać następujących środków ostrożności:

- Zachowaj bezpieczną odległość od otwartego ognia (piece, kominki), jeżeli nie jest osłonięty ekranem o szerokości 1-1,5 m,
- Zachowaj bezpieczną odległość 1,5-2 m od przenośnych grzejników i źródeł intensywnego ciepła (piece, kotły).
- Środki ochronne: Jeżeli tapeta ma być umieszczona w pobliżu źródła ognia (np. w kuchni w pobliżu kuchenki gazowej), fragment ściany należy zabezpieczyć okładziną ochronną (fartuchem) wykonaną ze szkła, płytek lub metalu.

Emisja lotnych związków organicznych (LZO)

Najważniejszym wskaźnikiem bezpieczeństwa jest poziom uwalniania substancji chemicznych. Rozporządzenie Parlamentu Europejskiego i Rady (UE) nr 305/2011 z dnia 9 marca 2011 r. ustanawiające zharmonizowane warunki wprowadzania do obrotu wyrobów budowlanych oraz europejska norma EN 15102:2019 "Dekoracyjne pokrycia ściennie" określają wymogi obowiązkowe do spełnienia.

Tapety firmy "ArtGrand" Sp. z o.o. zostały przebadane w akredytowanym laboratorium europejskim i zgodnie z protokołami badań nie wykazują żadnych przekroczeń norm. Protokoły badań są załączone.

Do tapetowania zalecamy stosowanie kleju na bazie skrobi, ponieważ zazwyczaj nie zawiera on substancji toksycznych. Podczas tapetowania wilgoć z kleju może odparować.

Aby zminimalizować ryzyko:

- Po wyschnięciu dobrze przewietrz pomieszczenie.
- Noś rękawiczki ochronne i maskę, jeśli masz wrażliwą skórę.

Zapobieganie pleśni

Nieprawidłowe nałożenie kleju, skutkujące pozostawieniem dużej ilości kleju między tapetą a podłożem, może być przyczyną powstawania pleśni, ponieważ klej na bazie skrobi używany do tapetowania stanowi dobre podłoże dla rozwoju pleśni. Wiadomo, że zarodniki pleśni są lekkie i niewidoczne, przenoszone przez masy powietrza i szybko się rozmnażają w ciepłym, wilgotnym środowisku:

- Przed przystąpieniem do klejenia ściana musi być sucha, czysta i płaska.
- Podczas naklejania ostrożnie usuń nadmiar kleju spod tapety.

Bezpieczeństwo dzieci i zwierząt domowych

Aby uniknąć ryzyka dla dzieci i zwierząt domowych:

- Trzymaj klej, resztki tapet i narzędzia poza zasięgiem dzieci.
- Uważaj, aby małe elementy nie zostały połknięte.
- Ochrona narożników: Zwierzęta najczęściej zaczynają gryźć lub drapać tapetę w narożnikach. Używaj specjalnych plastikowych lub metalowych nakładek.

Konserwacja, naprawa i utylizacja

Czyszczenie:

- Tapety winylowe można czyścić. W zależności od klasy odporności na ścieranie tapety można czyścić gąbką zwilżoną wodą (B-1), gąbką z detergentem (M-1), gąbką z detergentem oraz intensywniejszym szorowaniem (M-2), miękką szcztotką z proszkiem ściernym i detergentem (M-3).
- Unikaj bezpośredniego światła słonecznego, aby zapobiec blaknięciu kolorów.

Naprawa:

- Małe pęknięcia lub pęcherze można naprawić za pomocą kleju do tapet.
- Uszkodzone paski można wymienić (jeśli dostępny jest zapasowy materiał).

Utylizacja:

- Tapety papierowe i flizelinowe wyrzuca się do śmieci.
 - Tapety winylowe lub plastikowe należy utylizować zgodnie z lokalnymi przepisami.
- Resztki kleju i materiały opakowaniowe można poddać recyklingowi.

INSTRUKCJA TAPETOWANIA

1. Tapety na podkładzie papierowym

Upewnij się, że numer partii na wszystkich rolkach jest taki sam. Przed rozpakowaniem tapety sprawdź jakość towaru. Reklamacje bez przedstawienia dowodów nie będą przyjmowane. Dołącz tę etykietę i próbkę tapety.

Podłoże. Przygotuj powierzchnię ściany prawidłowo i jakościowo. Podłoże musi być mocne, suche i chłonne, czyste i gładkie.

Klej. Użyj dobrej jakości kleju specjalnego do tego typu tapet. Postępuj zgodnie z instrukcjami producenta kleju.

Przygotowanie. Przytnij tapetę, biorąc pod uwagę wysokość pomieszczenia i powtarzalność wzoru. Klej nałóż równomiernie i obficie na paski. Złóż paski klejoną stroną do wewnątrz i pozostaw na 2-5 minut, aby klej wsiąkł. Zachowaj jednakowy czas nasączania wszystkich pasów.

Klejenie. Przyłóż tapetę do powierzchni i wygładź wałkiem lub plastikową szpachlą, trzymając ją pionowo. Nie naciągaj tapety. Tapetę należy kleić na styk. Nie pocieraj tapety. Wygładź połączenia specjalnym wałkiem. Plamy kleju usuń wilgotną gąbką. Po przyklejeniu trzech pasów sprawdź, czy nie ma żadnych wad. W przypadku reklamacji koszt prac związanych z klejeniem tapety zostanie zrekompensowany w wysokości nieprzekraczającej trzech pasów. Do całkowitego wyschnięcia tapety zapewnij brak przeciągów i optymalną temperaturę w pomieszczeniu.

2. Tapety na podkładzie flizelinowym (kompozyt włókninowy)

Upewnij się, że numer partii na wszystkich rolkach jest taki sam. Przed rozpakowaniem tapety sprawdź jakość towaru. Reklamacje bez przedstawienia dowodów nie będą przyjmowane. Dołącz tę etykietę i próbkę tapety.

Podłoże. Przygotuj podłoże prawidłowo i jakościowo. Podłoże musi być suche i chłonne, czyste i gładkie, o jednolitym kolorze.

Klej. Użyj wysokiej jakości kleju przeznaczonego specjalnie do tego rodzaju tapet. Postępuj zgodnie z instrukcją producenta kleju.

Klejenie. Przytnij tapetę, biorąc pod uwagę wysokość pomieszczenia i powtarzalność wzoru. Za pomocą wałka nałóż cienką, równomierną warstwę kleju na ścianę i bez czekania przyłóż odmierzone pasy tapety. Kolejne pasy przyklejaj na styk i wygładź plastikową szpachlą do tapet lub wałkiem. Delikatnie usuń nadmiar kleju spod tapety. Nie pocieraj tapety. Wygładź połączenia specjalnym wałkiem. Plamy kleju usuń wilgotną gąbką. Po przyklejeniu trzech pasów sprawdź, czy nie ma żadnych wad. W przypadku reklamacji koszt prac związanych z klejeniem tapety zostanie zrekompensowany w wysokości nieprzekraczającej trzech pasów. Do całkowitego wyschnięcia tapety zapewnij brak przeciągów i optymalną temperaturę w pomieszczeniu.

DECLARATION OF CONFORMITY

Manufacturer: Canon Production Printing Netherlands B.V.
Van der Grintenstraat 10
5914 HH Venlo

Achieving CHPS, Green Globes & Green Guide for Healthcare Credits With GREENGUARD Certified Products

GREENGUARD Indoor Air Quality Certified® or GREENGUARD Children & SchoolsSM Certified products are recognized as criteria for several different green building programs. Low-emitting products that achieve GREENGUARD Certification can be used to qualify for a number of different credits, and are listed in the GREENGUARD Product Guide at www.greenguard.org. The following programs are highlighted to demonstrate some of the ways that GREENGUARD Certified products can be used to achieve points.

CHPS Best Practices Manual Volume III

The Collaborative for High Performance Schools (CHPS) is recognized as a pioneer in developing sustainable guidelines and a building rating program for schools. Variations of the CHPS program is used in **California, Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Texas, Vermont and Washington.**

- **EQ Credit 2.2 – Low-Emitting Materials (Children & Schools)**

Green Globes

Large developers and property management companies throughout Canada and the United States utilize Green Globes assessment and rating systems.

- **12.2.1 Source Control of Indoor Pollutants – Volatile Organic Compounds (Children & Schools)**
 - ❑ **12.2.1 – A – Adhesives:** Architectural, Substrates, Specialty, Sealants
 - ❑ **12.2.1 – B – Paints:** Latex Flat, Latex Non-flat, Floor Coverings, Insulations, Laminates, Hard Surfaces, Wallcoverings
 - ❑ **12.2.1 – C – Floors and Interior Fit-Outs**

Green Guide for Health Care 2.2

An industry-recognized rating system that is being used as a foundational document for developing LEED-NC for Healthcare.

- **EP Credit 3.1-3.5 – Ceiling Tiles (Children & Schools)**
- **EP Credit 3.1-3.5 – Wall Coverings (Children & Schools)**
- **EP Credit 3.1-3.5 – Flooring Systems (Children & Schools)**
- **EP Credit 3.6 – Furniture & Medical Furnishings (Children & Schools)**
- **EQ Credit 4.1 – Interior Adhesives & Sealants (Children & Schools)**
- **EQ Credit 4.2 – Wall & Ceiling Finishes (Children & Schools)**
- **EQ Credit 4.3 – Flooring Systems (Children & Schools)**
- **EQ Credit 4.5 – Furniture & Medical Furnishings (Children & Schools)**

HP Espanola, S.L.
Mr. Adrian Liga
Cami de Can Graells, 1-21
Sant Cugat del Valles
SPAIN
08174

Dear Mr. Liga:

Hewlett-Packard Espanola SL has shown their commitment to healthy indoor environments by testing the **HP PVC Free Wallpaper + Latex Print Technologies** wall finish to current indoor air quality requirements. We are pleased to inform you that your **HP PVC Free Wallpaper + Latex Print Technologies** wall finish, as delivered by Hewlett-Packard Espanola SL, has been shown to meet the GREENGUARD and GREENGUARD Children & Schools emission levels and is eligible to be listed as a low emitting product in the GREENGUARD Product Guide.

Your product is now eligible for listing in the GREENGUARD On-Line Product Guide. However, the product is neither GREENGUARD nor GREENGUARD Children & Schools Certified. Thus, Hewlett-Packard Espanola SL is not entitled to promote or market the product as GREENGUARD or GREENGUARD Children & Schools Certified. The qualified product will be listed on the guide, in the exact tested configuration, for a 12-month period as being tested once and meeting the GREENGUARD emission levels. If the product does not become certified or has not been retested within one year of the initial testing date, the product will be removed from the GREENGUARD Product Guide at the end of the 12-month period.

The GREENGUARD Certification ProgramSM offers many benefits in addition to Product Guide listing such as use of the GREENGUARD certification mark on your marketing and packaging materials, limiting liability exposure and litigation cost, differentiating your product within your market, commitment to ongoing quality performance, and possibly increasing revenue and market share. If you are interested in learning more information about GREENGUARD Certification, please contact the GREENGUARD Environmental Institute (GEI) at 1-800-427-9681.

Air Quality Sciences, Inc. has completed the product listing authorization form and submitted a copy to the GEI on your behalf. Listing of your products on the GEI website will occur within 5 days of the GEI's receipt of the authorization form. In the event that Hewlett-Packard Espanola SL does not wish to be listed on the GEI website, please notify the contact person listed below.

GREENGUARD Environmental Institute
Attn: Operations Manager
2211 Newmarket Parkway, Suite 110
Atlanta, GA 30067
1-800-427-9861, Fax: 770-980-0072

Thank you for testing with Air Quality Sciences. Please feel free to contact me at 678-931-2280 if you have any questions or require additional information. You may also contact the GEI directly at 1-800-427-9861 for listing questions.

Sincerely,

Allyson M. McFry
Chemistry Laboratory Director

Enclosures: AQS Report Nos. 16579-01 & -02

AUTHORIZATION FORM FOR LISTING OF TESTED, NON-CERTIFIED PRODUCTS PRODUCT EMISSIONS CRITERIA FOR ACCEPTABLE INDOOR AIR QUALITY WALL FINISH

Air Quality Sciences, Inc (AQS) has tested the product(s) below according to GREENGUARD's Test Method P066, 'Measuring Chemical Emissions from Various Sources Using Dynamic Environmental Chambers.' This method meets the requirements of ASTM D 5116, ASTM D 6670, and the U.S. Environmental Protection Agency's (USEPA) Environmental Technology Verification (ETV) protocol. Test results indicate how emissions from the product compare with currently acceptable GREENGUARD Emissions criteria and those of other programs recognizing these criteria. The product is not certified by the GREENGUARD Environmental Institute, but favorable results indicate that it is low emitting and should be considered for certification. The product has been tested once on the date indicated.

MANUFACTURER INFORMATION	Contact: HP Espanola, S.L. Attn: Adrian Liga Cami de Can Graells, 1-21 Sant Cugat del Valles Spain 08174 Phone: +34 9358 25725

Product Test Date	03/12/2010
PRODUCT DESCRIPTION	HP PVC Free Wallpaper + Latex Print Technologies

Below you will see an organization and the specified compliance requirements for each of the qualifying protocols for that organization. A **`Yes`** indicates the product(s) have been found to meet the low-emission requirements, and a **`No`** indicates the product(s) have failed to comply with the low-emission requirements.

Acceptable GREENGUARD Indoor Air Quality Criteria			Meets Criteria (Y/N)
GREENGUARD Certification ProgramSM	TVOC	≠0.5 mg/m ³	Yes
	Formaldehyde	≠0.05 ppm	Yes
	Total Aldehydes	≠0.1 ppm	Yes
	4-Phenylcyclohexene	≠0.0065 mg/m ³	Yes
	Individual VOC's	all ≠1/10 TLV	Yes
GREENGUARD Children & Schools Certification ProgramSM	TVOC	≠0.22 mg/m ³	Yes
	Formaldehyde	≠0.0135 ppm	Yes
	Total Aldehydes	≠0.043 ppm	Yes
	Total Phthalates	≠0.01 mg/m ³	Yes
	IVOCs	≠1/100 TLV and ≠½ chronic REL	Yes

Emissions data were obtained on the product as selected and delivered to AQS by the manufacturer. AQS did not oversee sample collection and packaging of product. AQS expressly disclaims any warranty or representation that the emissions criteria, met by the tested product, have been or will be approved, sanctioned, or authorized by any government agency, or that those emission criteria are sufficient or safe for human exposure. This product is not GREENGUARD CertifiedSM. Test results indicate that the product, as received and tested at AQS, initially meets acceptable IAQ criteria. For more information on GREENGUARD Certification ProgramsSM visit www.greenguard.org or call 1-800-427-9681.

EXECUTIVE SUMMARY

PROJECT DESCRIPTION

Air Quality Sciences, Inc. (AQS) is pleased to present the results of its indoor air quality (IAQ) evaluation of a **Wall Finish** product identified as `HP PVC Free Wallpaper + Latex Print Technologies_ wall covering as submitted by Hewlett-Packard Espanola SL. AQS conducted this study using a GREENGUARD product evaluation test protocol (1) following the requirements of The GREENGUARD Environmental Institute's (GEI) Product Certification Program, ASTM Standard D 5116, and the United States Environmental Protection Agency (USEPA) (2-4). Testing of the product was conducted using standard environmental chamber operating conditions as presented in Table 1. The wall covering was delivered to AQS by the manufacturer as presented in the Chain of Custody description in Appendix 1.

Products meeting all the emissions requirements of the GREENGUARD Environmental Institute are eligible for listing in the GREENGUARD Product Guide™ for a one year period from the date of notification to the manufacturer. The listed product is exactly as described in Appendix 1. The product is eligible to remain listed for one year as certification program processes are initiated. Listing in the GREENGUARD Product Guide does not qualify the product for certification, nor does it entitle Hewlett-Packard Espanola SL to market or promote the product as GREENGUARD Certified or use the registered certification mark.

The wall covering was monitored for emissions of total volatile organic compounds (TVOCs), formaldehyde, total aldehydes, and other individual volatile organic compounds (IVOCs) over a 168 hour exposure period. These emissions were measured and the resultant air concentrations were determined for each of the potential pollutants. Air concentration predictions were computer modeled based on the GEI Requirements, which include a standard room loading and ASHRAE Standard 62.1-2007 ventilation conditions (5). Product loading is based on standard wall usage (28.1 m²) in a 32 m³ room. Results were compared to current emission levels as required by the GREENGUARD standard.

RESULTS

The wall covering identified as `HP PVC Free Wallpaper + Latex Print Technologies_ and matching the product description in Appendix 1, qualifies as low-emitting; it meets all of the emission level requirements of the GREENGUARD Product Guide Listing as indicated below.

GREENGUARD Acceptable IAQ Criteria		Product Measurement	Product Compliance for IAQ
TVOC	≦0.5 mg/m ³	0.24 mg/m ³	Yes
Formaldehyde	≦0.05 ppm	0.006 ppm	Yes
Total Aldehydes	≦0.1 ppm	0.006 ppm	Yes
4-Phenylcyclohexene	≦0.0065 mg/m ³	< 0.003 mg/m ³	Yes
Individual VOC's	all ≦ 1/10 TLV*	-----	Yes

* All individual VOCs detected met the criteria of less than 1/10 the ACGIH established threshold limit values (TLVs) (ref. 14).

Emissions data and expected air concentrations are given in Tables 2-4, detected individual volatile organic compounds are listed in Table 5, and individual aldehydes are listed in Table 6. Appendix 2 presents supplemental emissions information on individual VOCs, which may be requested by certain purchasing programs.

PRODUCT EVALUATION METHODOLOGIES

ENVIRONMENTAL CHAMBER

The wall covering was tested in a small sized environmental chamber 0.0874 m³ in volume, and chemical emissions were analytically measured. Environmental chamber operation and control measures used in this study complied with GREENGUARD Method and Laboratory Quality Requirements and ASTM Standard D 5116. The chamber used is manufactured from stainless steel, and its interior is polished to a mirror-like finish to minimize contaminant adsorption. Air flow through the chamber enters and exits through an aerodynamically designed air distribution manifold also manufactured of stainless steel. Supply air to the chamber is stripped of formaldehyde, VOCs, and other contaminants, so that any contaminant backgrounds present in the empty chamber fall below strict levels (< 10 µg/m³ TVOC, < 10 µg/m³ total particles, < 2 µg/m³ formaldehyde, < 2 µg/m³ for any individual VOC). AQS chambers are process controlled and are equipped with a continuous data acquisition system for verification of the operating conditions of air flow, temperature, and humidity.

Air supply to the chamber was maintained at a temperature of 23°C ± 2°C and relative humidity at 50% ± 5%. The air exchange rate was 1.00 ± 0.05 air change/hour (ACH). Environmental chamber study parameters are presented in Table 1.

ANALYTICAL MEASUREMENTS

Selected Aldehydes

Emissions of selected aldehydes including formaldehyde were measured following ASTM D 5197 and USEPA IP-6A, measurement by HPLC, or high performance liquid chromatography (1, 6, 7). Solid sorbent cartridges with 2,4-dinitrophenylhydrazine (DNPH) were used to collect formaldehyde and other low-molecular weight carbonyl compounds in chamber air. The DNPH reagent in the cartridge reacted with collected carbonyl compounds to form the stable hydrazone derivatives retained by the cartridge.

The hydrazone derivatives were eluted from a cartridge with HPLC-grade acetonitrile. An aliquot of the sample was analyzed for low-molecular weight aldehyde hydrazone derivatives using reverse-phase high-performance liquid chromatography (HPLC) with UV detection. The absorbances of the derivatives were measured at 360 nm. The mass responses of the resulting peaks were determined using multi-point calibration curves prepared from standard solutions of the hydrazone derivatives. Measurements are reported to a quantifiable level of 0.1 µg based on a standard air volume collection of 45 L.

Volatile Organic Compounds

VOC measurements were made using gas chromatography with mass spectrometric detection (GC/MS). Chamber air was collected onto a solid sorbent which was then thermally desorbed into the GC/MS. Instrumentation included a sample concentrator (Perkin Elmer Model ATD 400, Model TurboMatrix ATD or TurboMatrix 650), a Hewlett-Packard/Agilent 5890 Series II, 6890 or 7890 Series Gas Chromatograph and a Hewlett-Packard/Agilent 5971, 5973 or 5975 Mass Selective Detector (GC/MS). The sorbent collection technique, separation, and detection analysis methodology has been adapted from techniques presented by the USEPA and other researchers. The technique follows USEPA Method IP-1B and ASTM D 6196 and is generally applicable to

C₆-C₁₆ organic chemicals with boiling points ranging from 35°C to 250°C (1, 7-11). Measurements are reported to a quantifiable level of 0.04 µg based on a standard air volume collection of 18 L.

Individual VOCs were separated and detected by GC/MS. The TVOC measurements were made by adding all individual VOC responses obtained by the mass spectrometer and calibrating the total mass relative to toluene. Individual VOCs, if analyzed, were quantified (relative to toluene as a standard) and identified using AQS's specialized indoor air mass spectral database. Other compounds were identified with less certainty using a general mass spectral library available from the National Institute of Standards and Technology (NIST). This library contains mass spectral characteristics of more than 75,000 compounds as made available from NIST, the USEPA and the National Institutes of Health (NIH). A match is first sought in the AQS database, which includes data for the gas chromatographic retention time of the compound in addition to the mass spectrum. This additional information, along with the use of spectra generated on AQS equipment, makes confidence in identifications made from the AQS database higher than in identifications made using only the NIST/USEPA/NIH mass spectral library.

AIR CONCENTRATION DETERMINATIONS

Emission rates of formaldehyde, total aldehydes, and TVOC were used in a computer model to determine potential air concentrations of the pollutants. The computer model used the measured emission rate changes over the one-week time period to determine the change in air concentrations that would accordingly occur.

The model measurements were made with the following assumptions: air within open office areas of the building is well-mixed at the breathing level zone of the occupied space; environmental conditions are maintained at 50% relative humidity and 23°C (73°F); there are no additional sources of these pollutants; and there are no sinks or potential re-emitting sources within the space for these pollutants. Ventilation and occupancy parameters were those provided in ASHRAE Standard 62.1-2007.

The constant emission factor (as determined at 168 hour) is used to determine compliance with the GREENGUARD Criteria by calculating an exposure concentration. The predicted exposure concentrations (C_{P,t}) (µg/m³) are calculated from the modeled emission factors as:

$$C_{P,t} = EF_{m,t} \frac{A}{V} \frac{1}{N}$$

where,

- C_{P,t} = predicted exposure concentration at time t (µg/m³)
- EF_{m,t} = modeled emission factor at time t (µg/m²·hr) or (µg/unit·hr)
- A = product area exposed in room (m² or unit) = 28.1 m²
- V = room volume (m³) = 32 m³
- N = room air change per hour (hr⁻¹) = 0.72 hr⁻¹

QUALITY CONTROL PROCEDURES FOR ENVIRONMENTAL CHAMBER EVALUATIONS

Air Quality Sciences, Inc. is an ISO 9001 registered and ISO 17025 accredited testing firm with defined and executed internal and third party verification programs encompassing emission test methods and low level pollutant measurements. AQS' quality control/assurance plan is designed to ensure the integrity of the measured and reported data obtained during its product evaluation studies. This QC program encompasses all facets of the measurement program from sample receipt to final review and issuance of reports. As an ISO 9001 registered and ISO 17025 accredited firm, AQS' product control, testing, data handling, and reporting protocols and procedures are standardized and controlled. AQS participates in proficiency and accreditation measurements programs for VOC and emission testing as required by the State of California, Germany Ministry of Health's Blue Angel Program, and GREENGUARD Certification Programs. Quality assurance is maintained through AQS' computerized data management system (ADM). An electronic 'paper trail' for each analysis is also maintained and utilized to track the status of each sample, and to store the results. A complete quality report can be provided upon request and all test data and analysis procedures are available on site for customer review.

Chamber Evaluations

One of the most critical parameters in AQS' product evaluations is the measurement of ultratrace levels of gaseous chemicals, typically in the ppb air concentration range. This necessitates a very rigidly maintained effort to control background contributions and contamination. These contributions must be significantly less than those levels being measured for statistically significant data to be obtained. AQS addresses this control in many directions including chamber construction materials, air purification and humidification, sampling materials and chemicals, sample introduction, and analysis.

Supply air purity is monitored on a weekly basis, using identical methodology to the chamber testing. The supply air is assured to contain less than 10 $\mu\text{g}/\text{m}^3$ TVOC, < 10 $\mu\text{g}/\text{m}^3$ total particles, < 2 $\mu\text{g}/\text{m}^3$ formaldehyde, and < 2 $\mu\text{g}/\text{m}^3$ for any individual VOC. Preventative maintenance ensures supply air purity, and corrective action is taken when any potential problems are noted in weekly samples. Supply air filter maintenance is critical for ensuring the purity of the chamber supply air. Chamber background samples are obtained prior to product exposure to ensure contaminant backgrounds meet the required specifications prior to product exposure. Results of this monitoring are maintained at AQS and available for on-site inspection.

All environmental chamber procedures are in accordance with ASTM D 5116 and D 6670 (12) and the USEPA's ETV Protocol (13), and meet the data quality objectives required.

Various measures are routinely implemented in a product's evaluation program. These include but are not limited to:

- appropriate record keeping of sample identifications and tracking throughout the study;

- calibration of all instrumentation and equipment used in the collection and analysis of samples;

validation and tracking of all chamber parameters including air purification, environmental controls, air change rate, chamber mixing, air velocities, and sample recovery;

analysis of spiked samples for accuracy determinations;

duplicate analyses of 10% of all samples evaluated and analyzed;

multi-point calibration and linear regression of all standardization;

analysis of controls including chamber backgrounds, sampling media, and instrumental systems.

VOC and Aldehyde Measurements

Precision of TVOC and aldehyde analyses is assessed by the relative standard deviation (%RSD) from duplicate samples, defined as the standard deviation of each data set divided by the mean multiplied by 100. VOC accuracy is based on recovery of toluene mass spiked onto sorbent material. QC data on TVOC measurements conducted for the 12 month period ending January 31, 2010, showed an average precision measurement of 5.6% RSD based on duplicate measurements and 100.6% recovery based on toluene spikes. Aldehyde accuracy is based on Workplace Analysis Proficiency Scheme (WASP) formaldehyde proficiency test results. QC data on total aldehyde measurements (including formaldehyde) for the 12 month period ending January 31, 2010, showed an average precision measurement of 2.6% RSD based on duplicate measurements and an average accuracy of 2.6% RPD based on WASP results. Performance audits have been conducted on-site at AQS by the U.S. Environmental Protection Agency for several industry test programs. They are favorable and are open for review at AQS. Third party proficiency and round robin testing for low level VOCs for national and international programs are continuously conducted and reported in AQS' quarterly quality report, available to all customers.

		$\mu\text{g}/\text{m}^3$	ppm
6.0	21.3	26	0.016
24.0	6.7	8	0.007
48.0	7.0	8	0.007
72.0	6.0	8	0.006
168.0	5.8	7	0.006

*Exposure hours are nominal (± 1 hour).

**Prediction based on standard wall usage (28.1 m²) in a room with ASHRAE 62.1-2007 ventilation conditions (32 m³ in volume and 0.72 ACH).

96.0 elapsed exposure hour sample was lost due to instrument malfunction.

BQL = Below quantifiable level of 0.1 μg based on a standard 45 L air collection volume.

APPENDIX 2

APPENDIX 2 FOR GREENGUARD EMISSIONS TEST

The following chemicals as identified in the emissions from the wall finish product identified as 'HP PVC Free Wallpaper + Latex Print Technologies' were found to exist on certain regulatory lists. This addendum only provides a statement regarding possible health effects associated with this compound and not the relative risks of exposure. Proper interpretation of the risks associated with exposure to a given regulated compound requires a more detailed evaluation of toxicological activity. You may be required to submit this information for certain purchasing programs. You may also use this information to assist in further product development efforts.

COMPOUND	✓() = FOUND IN LISTING (CLASS)		
	CAL PROP. 65	NTP	IARC
2(3H)-Furanone, dihydro (Butyrolactone)			✓(3)
2,6-Di-tert-butyl-4-methylphenol (BHT)			✓(3)
2-Pyrrolidinone, 1-methyl	✓(2)		
Acetaldehyde	✓(1)	✓(2B)	✓(2B)
Formaldehyde	✓(1)	✓(2B)	✓(1)
Xylene, ortho			✓(3)

CAL Prop. 65: California Health and Welfare Agency, Proposition 65 Chemicals

1 = known to cause cancer

2 = known to cause reproductive toxicity

NTP: National Toxicology Program

2A = known to be carcinogenic to humans

2B = reasonably anticipated to be carcinogenic to humans

IARC: International Agency on Research of Cancer

1 = carcinogenic to humans

2A = probably carcinogenic to humans

2B = possibly carcinogenic to humans

3 = unclassifiable as to carcinogenicity to humans

4 = probably not carcinogenic to humans
